Then you must want to see this amazing learning product right away!

NEW QUESTION: 1

Which statement describes the function of rekey messages?

- A.** They prevent unencrypted traffic from passing through a group member before registration.
- B.** They refresh IPsec SAs when the key is about to expire.
- C.** They authenticate traffic passing through a particular group

member.

D. They trigger a rekey from the server when configuring the rekey ACL.

Answer: B

Explanation:

Rekey messages are used to refresh IPsec SAs. When the IPsec SAs or the rekey SAs are about to expire, one single rekey message for a particular group is generated on the key server. No new IKE sessions are created for the rekey message distribution. The rekey messages are distributed by the key server over an existing IKE SA. Rekeying can use multicast or unicast messages.
