Explanation/Reference:
Explanation:
IPv6 nodes (hosts and routers) are required to join (receive packets destined for) the following multicast groups:
* All-nodes multicast group FF02:0:0:0:0:0:0:1 (scope is link-local)
* Solicited-node multicast group FF02:0:0:0:0:1:FF00:0000/104 for each of its assigned unicast and anycast addresses
IPv6 routers must also join the all-routers multicast group

FF02:0:0:0:0:0:0:2 (scope is link-local).
The solicited-node multicast address is a multicast group that
corresponds to an IPv6 unicast or anycast address. IPv6 nodes
must join the associated solicited-node multicast group for
every unicast and anycast address to which it is assigned. The
IPv6 solicited-node multicast address has the prefix
FF02:0:0:0:0:1:
FF00:0000/104 concatenated with the 24 low-order bits of a
corresponding IPv6 unicast or anycast address (see Figure 2).
For example, the solicited-node multicast address corresponding
to the IPv6 address 2037::01:800:200E:8C6C is
FF02::1:FF0E:8C6C. Solicited-node addresses are used in
neighbor solicitation messages
