100% Free Updates Free updates up to 3-Months without any extra charges.

**NEW QUESTION: 1**

HOT SPOT

**Answer:**

Explanation:

Explanation:

```
Box 1: var cache = connection.GetDatabase();
```

Once the connection is established, return a reference to the redis cache database by calling the ConnectionMultiplexer.GetDatabase method.

```
Box 2: cache.StringSet("color",
```

```
colorSelection, TimeSpan.FromMinutes(90));
```

The TimeSpanFromMinutes method returns a TimeSpan that represents a specified number of minutes, where the specification is accurate to the nearest millisecond.

Example: The following code snippet shows how to set an expiration time of 90 minutes on a key.

```
// Add a key with an expiration time of 90 minutes
```

```
await cache.StringSetAsync("data:key1", 99,
```

```
TimeSpan.FromMinutes(90));
```

**Answer: A,C**

**NEW QUESTION: 3**

Which of the following cannot be done using AWS Data Pipeline?

- A. Create complex data processing workloads that are fault tolerant, repeatable, and highly available.
- B. Move data between different AWS compute and storage services as well as on premise data sources at specified intervals.
- C. Regularly access your data where it's stored, transform and process it at scale, and efficiently transfer the results to another AWS service.
- D. Generate reports over data that has been stored.

**Answer: D**

Explanation:

Explanation

AWS Data Pipeline is a web service that helps you reliably process and move data between different AWS compute and storage services as well as on premise data sources at specified intervals. With AWS Data Pipeline, you can regularly access your data where it's stored, transform and process it at scale, and efficiently transfer the results to another AWS.

AWS Data Pipeline helps you easily create complex data processing workloads that are fault tolerant, repeatable, and highly available. AWS Data Pipeline also allows you to move and process data that was previously locked up in on premise data silos.
