Generally speaking, in this materialistic society, money means high social status, [AZ-500](#) Or if you have other suggestions about our Microsoft Azure Security Technologies training pdf, our service staff will be very happy about the advice that you put forward.

Besides, if you are very care about the update information [Microsoft Azure Security Technologies](#) about Microsoft Azure Security Engineer Associate Microsoft Azure Security Technologies exam prep dumps, you can pay attention to the version No.

**NEW QUESTION: 1**

Which statement is false about Autonomous Database Oracle Client Credentials (Wallets)?

- A. The Wallet for the Autonomous Database is the same as the Transparent Data Encryption (TDE) wallet.
- B. In addition to the Oracle Client Credential Wallet, a user must have a username and password in order to connect to the Autonomous Database.
- C. The Oracle Client Credential file is downloaded as a ZIP file.
- D. You MUST have an Oracle Client Credential Wallet in order to connect to the Autonomous Database.

**Answer: A**

Explanation:

When you download the client credentials from the Download Wallet dialog, you must enter a wallet password in the password field and confirm the password in the confirm password field. The password must be at least eight characters long and must include at least one letter and one numeric character or one special character. This password protects the download client credentials wallet. This wallet is not the same as the transparent data encryption wallet for the database. Therefore, a different password is used to protect the client credentials wallet.

## **NEW QUESTION: 2**

DRAG DROP

You are the Office 365 administrator for a company. The company is currently migrating from a hosted POP3 email solution to Microsoft Exchange Online. The company maintains extensive lists of external contacts in several Microsoft Excel workbooks.

You plan to import all the external contact information from the workbooks into the Exchange Online Global Address List (GAL). The external contacts must not be able to sign in to your company's Windows Azure Active Directory service.

You consolidate all the external contact information into a file named ExternalContacts.

You need to import the file into the GAL.

How should you complete the relevant Windows PowerShell script? To answer, drag the appropriate command segments to the correct targets. Each command segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

### **Answer:**

Explanation:

Box 1: We use the Import-CSV cmdlet to import the list of names in the ExternalContacts.csv file.

Box 2: We specify the filename of the csv file to import.

Box 3: We use the New-MailContact cmdlet to create new mail-enabled contacts in Active Directory based on the names in the csv file.

A mail contact is described as, "A mail-enabled Active Directory contact that contains information about people or organizations that exist outside the Exchange organization. Each mail contact has an external email address. All messages sent to the mail contact are routed to this external email address." Mail contacts are listed in the Exchange Online Global Address List (GAL) but they cannot sign in to the Azure Active Directory service.
