**NEW QUESTION: 3**
Your network contains an Active Directory domain that is synced
to Microsoft Azure Active Directory (Azure AD). All computers
are joined to the domain and registered to Azure AD.
The network contains a Microsoft System Center Configuration
Manager (Current Batch) deployment that is configured for
co-management with Microsoft Intune.
All the computers in the finance department are managed by
using Configuration Manager. All the computers in the marketing
department are managed by using Intune.
You install new computers for the users in the marketing
department by using the Microsoft Deployment Toolkit (MDT).
You purchase an application named App1 that uses an MSI
package.
You need to install App1 on the finance department computers
and the marketing department computers.
How should you deploy App1 to each department? To answer, drag
the appropriate deployment methods to the correct departments.
Each deployment method may be used once, more than once, or not
at all. You may need to drag the split bat between panes or
scroll to view content.
NOTE: Each correct selection is worth one point.
