Answer:
Explanation:

Explanation:
With the Azure Portal:

Step 1: In the Azure portal, create a Batch account.
First we create a batch account.
Step 2: In the Azure portal, create a pool of compute nodes Now that you have a Batch account, create a sample pool of Windows compute nodes for test purposes.
Step 3: In the Azure portal, add a Job.
Now that you have a pool, create a job to run on it. A Batch job is a logical group for one or more tasks. A job includes settings common to the tasks, such as priority and the pool to run tasks on.
Initially the job has no tasks.
Step 4: In the Azure portal, create tasks
Now create sample tasks to run in the job. Typically you create multiple tasks that Batch queues and distributes to run on the compute nodes.

NEW QUESTION: 2
Refer to the PE1 router routing table output exhibit.

What is causing the i su 10.1.10.0/24 [115/30] via 0.0.0.0, 00:40:34, Null0 entry on the PE1 router routing table?
A. The 10.1.10.0/24 has been suppressed because the more specific 10.1.10.x/32 IS-IS routes have been configured to leak into the IS-IS non-backbone area.
B. The PE1 router has been configured to summarize the 10.1.10.x/32 IS-IS routes to 10.1.10.0/24.
C. The PE1 router is receiving the 10.1.10.0/24 summary route from the upstream L1/L2 IS-IS router.
D. The 10.1.10.0/24 has been suppressed because IS-IS auto-summary has been disabled on the PE1 router.
E. The 10.1.10.0/24 has been suppressed because of a route policy configuration on the PE1 router.
Answer: B
Explanation:

NEW QUESTION: 3
A Security Administrator wants to increase the amount of processing cores on a Check Point Security Gateway. He starts by increasing the number of cores, however the number of kernel instances remain the same way. What is the correct process to increase the number of kernel instances?
