An advantage of virtualizing servers, databases, and office applications is:

- A. Stronger access control.
- B. Decentralized management.
- C. Providing greater resources to users.
- D. Centralized management.

Answer: D

Explanation:

Virtualization consists of allowing one set of hardware to host multiple virtual Machines and in the case of software and applications; one host is all that is required. This makes centralized management a better prospect.

NEW QUESTION: 3

Sam, the CFO of XYZ Company, finds that in the expenditure budget of the current year, there are many funds available in the stationery account, whereas there is not much amount left for employee travel expenses. Sam instructs the budget analyst John to transfer 80% of the stationery account to the travel expenses account. While transferring the amount, John encountered errors and approached Sam for a resolution. Sam reviews the situation and clarifies it to John. Choose what Sam would have explained to John.

- A. There must be some budgetary control enabled on the stationery and travel expenses accounts, and a transfer can be made only after a funds check.
- B. There must be some budgetary control enabled on the stationery account, and a transfer can be made only after a funds check.
- C. There must be some budgetary control enabled on the travel expenses, and a transfer can be made only after a funds check.

D. It is not possible to transfer amount from one account to another unless the absolute amount is known.

So John should have calculated 80% of the stationery account and then tried to make the transfer.

NEW QUESTION: 4

A. Option B

B. Option D

C. Option A

D. Option C

Answer: C

Explanation:

Explanation

Your virtual machines can also be connected to physical hard disks on the virtualization server virtual hard disks. (This is sometimes referred to as having a "pass-through" disk connected to a virtual machine.) The physical hard disk that you connect to a virtual machine can also be a network-attached disk, like a logical unit number (LUN) in a storage area network (SAN). A common example is an iSCSI LUN that has been mapped to the virtualization server by using Microsoft iSCSI Initiator.

Because the virtualization server sees network-attached storage as local disks, the iSCSI LUN can be connected to a virtual machine.

The most important limitation about having a physical hard disk connected to a virtual machine is that it cannot be connected to the virtualization server or to other virtual machines at the same time. The virtual machine must have exclusive access to the physical hard disk.

Pass-through Disk Configuration Hyper-V allows virtual machines to access storage mapped directly to the Hyper-V server without requiring the volume be configured. The storage can either be a physical disk internal to the Hyper-V server or it can be a Storage Area Network (SAN) Logical Unit (LUN) mapped to the Hyper-V server. To ensure the Guest has exclusive access to the storage, it must be placed in an Offline state from the Hyper-Vserver perspective.
