- A. the Active Directory account used by Operations Manager must be part of the Exchange Administrators group
- B. configure the SMTP server to relay monitoring messages from the Enterprise Vault server
- C. Enterprise Vault services must exist on the server you wish to install Operations Manager on
- D. the Active Directory account used for monitoring requires an Exchange Mailbox
- E. the Active Directory account used for monitoring must have the password set to "Never Expire".

Answer: C,E

NEW QUESTION: 2

Which two commands are required to configure port security on a switch?

- A. Switch(config-if)#Switch port-security
- B. Switch(config-if)#Switch port-security Mac-address sticky
- C. Switch(config-if)#Switch mode access
- D. Switch(config-if)#Switch port-security maximum 10

Answer: B

NEW QUESTION: 3

Which set of commands conditionally advertises 172.16.0.0/24 as long as 10.10.10.10/32 is in the routing table?

Answer:

Explanation:

Advertise maps are used for conditional routing to advertise specified prefixes if something which is specified in exist map exists. In our question we need to advertise 172.16.0.0/24 if 10.10.10.10/32 exists in the routing table so we have to use command. "neighbor x.x.x.x advertise-map <prefix-list of 172.16.0.0/24> exist-map <prefix-list of 10.10.10.10/32>". Therefore B is correct.

NEW QUESTION: 4

Examine the exhibit.

- A. Kernel Panic
- B. Software Update
- C. Firmware Update
- D. Power-On Self-Test

Answer: A

Explanation:

Kernel Panic Basics

A kernel panic is a type of error that occurs when the core (kernel) of an operating system receives an instruction in an unexpected format, or that it fails to handle properly.

A kernel panic may also follow when the operating system is not able to recover from a different type of error. A kernel panic can be caused by damaged or incompatible software or, more rarely, damaged or incompatible hardware.

Kernel panics in Mac OS should not be confused with an application freeze. Instead of just one application no longer functioning, the entire system is no longer operable.

Here you see the onscreen dialog a Mac running Mac OS X 10.2 or later displays.

For more detailed information on kernel panics, review "About 'You need to restart your computer' (kernelpanic) messages". <http://support.apple.com/kb/TS3742>
