We provide real Hitachi HCE-5920 exam questions with exact answers.

NEW QUESTION: 1
A company has been running their application on Compute Engine. A bug in the application allowed a malicious user to repeatedly execute a script that results in the Compute Engine instance crashing. Although the bug has been fixed, you want to get notified in case this hack re-occurs.
What should you do?
A. Create an Alerting Policy in Stackdriver using a Process Health condition, checking that the number of executions of the script remains below the desired threshold. Enable notifications.
B. Log every execution of the script to Stackdriver Logging. Create a User-defined metric in Stackdriver Logging on the logs, and create a Stackdriver Dashboard displaying the metric.
C. Create an Alerting Policy in Stackdriver using the CPU usage metric. Set the threshold to 80% to be notified when the CPU

usage goes above this 80%.
D. Log every execution of the script to Stackdriver Logging.
Configure BigQuery as a log sink, and create a BigQuery
scheduled query to count the number of executions in a specific
timeframe.
Answer: B
Explanation:
