NEW QUESTION: 1
Your network contains five servers that run Windows Server 2012 R2.
You install the Hyper-V server role on the servers. You create an external virtual network switch on each server.
You plan to deploy five virtual machines to each Hyper-V server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1.
Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.
You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute
connections across all of the virtual machines.
Solution: On each Hyper-V server, you create a new private
virtual network switch. From the properties of each virtual
machine, you add a second virtual network adapter and connect
the new virtual network adapters to the new private virtual
network switches.
