Answer: D,E

NEW QUESTION: 2
A large corporation has data centers geographically distributed across multiple continents. The company needs to securely transfer large amounts of data between the data center. The data transfer can be accomplished physically or electronically,

but must prevent eavesdropping while the data is on transit.
Which of the following represents the BEST cryptographic
solution?
A. Using PKI to encrypt each file and transferring them via an
Internet based FTP or cloud server
B. Exchanging VPN keys between each data center via an SSL
connection and transferring the data in the VPN
C. Driving a van full of Micro SD cards from data center to
data center to transfer data
D. Using a courier to deliver symmetric VPN keys to each data
center and transferring data in the VPN
Answer: B
Explanation:
A virtual private network (VPN) is an encrypted communication
tunnel that connects two systems over an untrusted network,
such as the Internet. They provide security for both
authentication and data transmission through a process called
encapsulation. Secure Sockets Layer (SSL) can be used to
exchange the VPN keys securely. SSL is used to establish secure
TCP communication between two machines by encrypting the
communication.
