NEW QUESTION: 3

Refer to the exhibit.

AS 65500 is running OSPF as its IGP and has two eBGP connections to the Internet provider AS 65501. The provider requires that you advertise all of the prefixes in AS 65500 to the provider as a single 192.168.12.0/22 route. Currently only Routers A and B are able to reach the Internet. Which of the following additions to the configuration will solve this issue?

A. RouterA(config-router)#redistribute ospf 1

B. RouterA(config-router)#ebgp multihop 1

C. RouterA(config)# ip route 192.168.12.0 255.255.252.0 null 0

D. RouterA(config-router)#neighbor 192.168.14.253 next-hop-self

E. RouterA(config-router)#neighbor 192.168.14.253 local-as 65500

F. RouterA(config)#ip cef

Answer: C

Explanation:

The synchronization rule states "A BGP router should not use, or advertise to an external neighbor, a route learned by IBGP, unless that route is local or is learned from the IGP". Notice that IGP here can be a static route.

In this case, unless there is an entry about network 192.168.12.0 in the routing table of RouterA, RouterA will not advertise this network to its EBGP -> B is correct (even if this static route points to Null0).

Note: Although this question states that OSPF is being used as IGP but for some reasons, network 192.168.12.0/22 is not advertised to RouterA -> RouterA does not have this route in its routing table.

```

D. DB_FLASH_CACHE_ZISE = 64G, 64Gã, 'è"-ãšã-ã¾ã•™ã€,

Answer: D

Explanation:

Explanation

* Smart Flash Cache concept is not new in Oracle 12C - DB Smart Flash Cache in Oracle 11g.

In this release Oracle has made changes related to both initialization parameters used by DB Smart Flash cache. Now you can define many files|devices and its sizes for "Database Smart Flash Cache" area. In previous releases only one file|device could be defined.

```
DB_FLASH_CACHE_FILE = /dev/sda, /dev/sdb, /dev/sdc
```

```
DB_FLASH_CACHE_SIZE = 32G, 32G, 64G
```

So above settings defines 3 devices which will be in use by "DB Smart Flash Cache"

```
/dev/sda - size 32G
```

```
/dev/sdb - size 32G
```

```
/dev/sdc - size 64G
```

New view V\$FLASHFILESTAT - it's used to determine the cumulative latency and read counts of each file|device and compute the average latency
